

Baxter

WHEN JUST ANY LINE WON'T DO

SINGLE SET TECHNOLOGY

You need a line you can trust. Baxter's unique **SINGLE SET TECHNOLOGY** travels with patients from one clinical care area to the next with fewer set changes—helping reduce the risk of touch contamination.¹ And because Baxter sets are both gravity and IV pump compatible, anticipate minimal waste and reductions in IV set expenditures. When it comes to efficiency and patient safety, why use anything else.

¹ Standard 43: Administration Set Change. *The Art and Science of Infusion Nursing*. Journal of Infusion Nursing. September 2016; 34(1S).

Rx Only. For the safe and proper use of the device refer to the appropriate instructions for use.

Because Safety is Not an Option

SINGLE SET TECHNOLOGY

Unique administration sets that are both gravity and IV pump compatible

“When an intermittent infusion is repeatedly disconnected and reconnected for the infusion, there is increased risk of contamination... potentially increasing the risk of CRBSI” – INS¹

Simplify the patient's journey throughout the hospital by mitigating risk where possible and increase efficiencies.

Utilizing Baxter's Single Set Technology (SST) may result in:

Reduction of IV touch contamination

IV set expenditure savings

Waste reduction

SKU reduction

Lowered indirect costs (nursing time for set changes)

UP TO
53%
COST SAVINGS
IN IV TUBING SET EXPENDITURES*²
